```
====== Instance Static Variable Example ===========
class gitUsers {
        int totalLocalRepo = 10; // instance variable
        static int totalRemoteRepo = 20; // static variable
       void gitStatus(){
               System.out.println("totalLocalRepo :"+totalLocalRepo);
               System.out.println("totalRemoteRepo :"+totalRemoteRepo);
       }
       public static void main(String[] args){
               gitUsers u1 = new gitUsers();
               gitUsers u2 = new gitUsers();
               u1.gitStatus();
               u2.gitStatus();
               u2.totalLocalRepo = 20;
               u2.totalRemoteRepo = 500;
               u1.gitStatus();
               u2.gitStatus();
       }
}
```
